"Byzantine fault-tolerant algorithms secure the smart contract in a decentralized way from attempts to tamper with it. Once a smart contract is deployed, it cannot be updated. Smart contracts on a blockchain can store arbitrary state and execute arbitrary computations. End clients interact with a smart contract through transactions. Such transactions with a smart contract can invoke other smart contracts. These transactions might result in changing the state and sending coins from one smart contract to another or from one account to another."

"In August 2023, Circle and Coinbase dissolved the Centre Consortium, the entity responsible for managing USDC since 2018. This decision granted Circle full governance over USDC. In February 2024, Circle discontinued USDC on the TRON blockchain following a risk management review. Although the minting of new USDC tokens halted on 21 February 2024, customers had until February 2025 to transfer USDC to other blockchains. According to Forbes in December 2024, USDC primarily competes with Tether, which dominates the market by market capitalization. USDC and Tether nearly reached parity in 2022, but USDC declined coinciding with the Collapse of Silicon Valley Bank, where Circle held reserves."
